

SAP Ariba assumes your supplier records are ready on day one, but most aren't. Incomplete, outdated, or duplicated entries in your vendor master lead to prolonged cycles, rework, and unexpected costs before the system is even operational.

TealBook ensures your supplier data is accurate, enriched, and continuously refreshed so Ariba performs as intended from day one.

Before TealBook	After TealBook
 Duplicate and fragmented records across SAP Ariba	 Verified supplier records with resolved duplicates and matched legal entities
 Missing or outdated fields (e.g., diversity certifications, tax ID, business #, product/service classification)	 30+ enriched attributes added and automatically refreshed
 Manual supplier verification draining internal resources	 Automated supplier verification using registries and government filings
 Unmapped corporate hierarchies limiting reporting accuracy	 Mapped parent, subsidiary, and affiliate relationships for tiered visibility
 Prolonged migration and post-go-live delays caused by unresolved data issues	 Supplier records are verified, enriched, and hierarchy-mapped ahead of go-live, reducing rework, accelerating deployment, and minimizing implementation costs
 Gaps in compliance and audit preparation	 Full data traceability with confidence scores and source provenance

How TealBook supports your SAP Ariba strategy

Automated Supplier Verification

We match each record in your vendor master to the correct legal entity using global business registries, and procurement context—reducing duplicates and resolving inconsistencies in naming, IDs, and addresses.

Attribute Enrichment Without Portals

TealBook enriches each supplier profile with over 30 fields (e.g., diversity status, NAICS/SIC classifications, business #, ownership type etc.) without requiring suppliers to log in, fill out forms, or submit documentation.

Corporate Hierarchy Mapping

We identify and map global supplier relationships, parent companies, subsidiaries, and affiliates to support bundled negotiations, tiered risk reporting, and category-based sourcing initiatives.

Audit-Ready Data Governance

Every field is traceable back to its source. TealBook provides confidence scoring and provenance for each data point, simplifying compliance audits and internal reporting.

Flexible Integration

TealBook connects with SAP Ariba via API—no heavy integration required.

Make SAP Ariba work harder from day one

- ✓ Cut down on manual rework and duplicate remediation post go-live
- ✓ Accelerate onboarding and unlock automation
- ✓ Improve compliance and audit readiness
- ✓ Gain full visibility into supplier diversity and risk exposure
- ✓ Deliver better insights across global business units

Start with a no-commitment supplier data readiness scan

Before SAP Ariba can deliver real efficiency, the data behind it needs to be reliable. TealBook identifies hidden issues like duplicate suppliers, unmapped hierarchies, and missing compliance-critical fields—so your supplier data supports faster, cleaner, and more confident decision-making. No commitment required.

How does it work?

1. Share sample supplier records

Share a sample of your SAP Ariba vendor master—no cleansing needed.

2. We analyze your data

Using TealBook's AI-powered engine, we detect and flag:

- Duplicate supplier records
- Inconsistent names, addresses, Tax IDs, etc.
- Missing data fields: By layering 30+ critical attributes, like ownership, diversity certifications, and more
- Parent-child and affiliate relationship mapping opportunities

3. Review the findings

Our experts walk you through the results highlighting opportunities to streamline data, improve visibility, and strengthen your supplier foundation. From there, we align on potential next steps based on your goals.

Start clean. Operate smarter. Make SAP Ariba work from day one.
