

Trusted supplier data across your whole procurement lifecycle

TealBook’s Supplier Data Platform (SDP) autonomously collects, verifies, enriches, and distributes supplier data across your data lakes, existing applications, tools, and systems.

Use SDP to optimize your existing procurement technologies, workflows and processes, and maximize the investments you’ve made in your suppliers, people, and source-to-settle and ERP tools.

Eliminate the time spent on manual efforts and relying on supplier portals. Lay the foundation for trusted supplier data with TealBook’s Supplier Data Platform.

With TealBook you can:

Increase operational efficiency
by improving the accuracy of supplier data without any manual intervention

Improve spend analytics
by having accurate, timely supplier data with increased attributes

Move from tactical to strategic
by allowing your most skilled employees to focus on strategic business opportunities instead of manual supplier data management

Provide trusted data business-wide
by gaining access to a trusted source of supplier data that seamlessly integrates with any data lake or enterprise system

Here’s how it works

Our technology **harvests and aggregates** data from thousands of external databases, strategic data partners, and your provided internal sources.

Each data attribute is given a **TrustScore** from Low to Very High so you can determine your organization’s confidence threshold.

Based on business rules your organization establishes, use the **Business Rules Engine** to route data to your existing systems.

Get **the right data in the right place**, create endless configurable workflows, and share them with confidence across your organization.

Trusted by leading global brands and Fortune 500 companies

The only source for trusted supplier data
